This gene was identified within a LOH region at 11q23.3 of neuroblastoma. Reference sequence was predicted from genomic sequences of a BAC contig mapped at 11q23.3 using several gene prediction programs. Expression was analyzed by RT-PCR and Northern blot.. Then, a part of this CDNA was obtained by CDNA

Direct Submission

Direct Submission

Submitted (08-MAR-2001) Sanger Centre, Hinxton, Cambridgeshire, CB10 18A, UK. E-mail enquiries: humquery@sanger.ac.uk Clone requests: clonerequest@sanger.ac.uk

On Jul 22, 2000 this sequence version replaced gi:5777578.

During sequence assembly data is compared from overlapping clones. Where differences are found these are annotated as variations together with a note of the overlapping clone name. Note that the variation annotation may not be found in the sequence submission corresponding to the overlapping clone, as we submit sequences with only a small overlap as described above.

The following abbreviations are used to associate primary accession numbers given in the feature table with their source databases:

Em; EmBL; Sw., SWISSPROT; Tr., TREMBL; Wp.; WORMPEP; Information on the WORMPEP database can be found at http://www.sanger.ac.uk/Projects/C elegans/wormpep This sequence that of constructed by the Sanger Centre Chromosome 20 http://www.sanger.ac.uk/Projects/C elegans/wormpep This sequence is the entire information can be found at http://www.sanger.ac.uk/HGP/Chr20 of Clone RPF-107712 is at 71329 in this sequence. This sequence is the entire insert of clone RPF-107712 is at 71329 in this sequence. This sequence was finished as follows unless otherwise noted; all regions were either double-stranded or sequenced with an alternate chemistry or covered by high quality data (i.e., phred quality = compressions and repeats; all regions were covered by at least one plasmid subclone or more than one Mis subclone; and the assembly was confirmed by restriction digest. RP4-718P11 is from the library RPCI-4 constructed by the group of Pieter de Jong. For http://www.databac./home.htm

Human DNA sequence from clone RP4-718P11 on chromosome

20p12.1-12.3. Contains part of the gene for a novel class II
aminotransferase similar to serine palmotyltransferase, ESTS, and GSSs, complete sequence.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         AL109983.2 GI:9368492

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      sequencing project.
This sequencing project.
This sequence is from the
BBSRC/Dundee/Nottingham/Sanger/Sheffield/UMIST cDNA collection,
from a library constructed by Elizabeth Bosch. CDNA was prepared
from a Na extracted from heads, normalised, and poly A-trimmed.
ECORI-NotI cut CDNA was then ligated into the vector. Vector:
pBluescript II KS(+); Site_1: ECORI; Site_2: NotI Host: Escherichia
coli DH10B.

The present sequence is that of clone 15, which encodes a TRAP2 binding protein. Clone 15 is a partial clone, which lacks most of its 5' end of the coding DNA sequence. A cDNA library prepared from B-cells was corrended for proteins that associate with TRAP2, and the present sequence isolated. The clone 15 protein is capable of binding to at least amino cids 222-501 of TRAP2. The TRAP-2 binding proteins can be used for mediation or mediation in cells of the activity of NF-kappaB or any other intracellular signalling activity modulated or mediated by TRAP2. TRAP-binding proteins are especially used for prevention or treatment of pathological conditions associated with NF-kB induction, e.g. acute comparable of conditions associated with NF-kB induction, e.g. acute comparable of the pancreas that results in diabetes, the death of cells in graft rejection, the death of cligodendrocytes in the brain in multiple sclerosis, and AlDS-inhibited T cell suicide which causes conflict in for modulating of ligands capable of binding to a protein, which are useful for modulating cellular activity modulated by TRAP2.
                                                                                                                                                                                                                                                                                                                                             ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        099

                                  The invention relates to isolated polynuclectide (I) and polypeptide (II) sequences. (I) is useful as hybridisation probes, polymerase chain reaction (PCR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The polynuclectides are also used in diagnostics as expressed sequence tags for identifying expressed genes. (I) is useful in gene therapy techniques to restore normal cativity of (II) or to treat disease states involving (II). (II) is useful for generating antibodies against it, detecting or quantitating a useful for generating antibodies against it, detecting or quantitating of polypeptide in issue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical imaging of sites expressing (II). (II) and (II) are useful for treating disorders involving aberrant protein expression or biological activity. The colypeptide and polynuclectide sequences have applications in diagnostics, forensics, gene mapping, identification of mutations cresponsible for genetic disorders or other traits to assess biodiversity

The invention relates to isolated polynucleotide (I) and polypeptide (II) sequences. (I) is useful as hybridisation probes, polymerase chain reaction (PCR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The polynucleotides are also used in diagnostics as expressed sequence tags for identifying expressed control of (II) are to treat disease states involving (II). (II) is cusful for generating antibodies against it, detecting or quantitating a colypopic in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical imaging of sites expressing (II). (I) and (II) are useful for treating disorders (Involving aberrant protein expression or biological activity. The colypopide and polymucleotide sequences have applications in diagnostics, for genetic disorders or other tratts to assess biodiversity and to produce other types of data and products dependent on DNA and amino acid sequences of their invention. Note: The sequence data for this called not appear in the printed specification, but was obtained in celectronic format directly from WIPO at
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           545
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       485

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              259
                                                                                                                                                                                                                                                                                                                                                                                                                                 This invention describes a novel polypeptide sharing one or more homologous amino acid domains with the legless (1gs) protein, a downstream component of the Wnt/Wingless (Wnt/Wg) signaling pathway involved in the formation and maintenance of spatial arrangements and proliferation of tissues during development, and in the formation and growth of many human tumours. The products of the invention have growth of many human tamoers are used to treat cellular disorders, blood disorders and cancers caused by over-stimulation of the Wnt pathway, where the cancerous condition is colon, breast, head and neck, brain, thyroid, medulloblastoma or skin cancer. The product could also be used to promote tissue regeneration and repair. This sequence encodes the human legless (1gs) protein homologue higs-1 described in the disclosure of the invention
                                                                                                                                                                                                                                                                                                                                                    Novel polypeptide useful in therapeutic method for treating disorders of cell fate such as cell differentiation or cell proliferation.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      CTGGCCAGGCCCAGAGCACAAGAAAGCAACCAACAAATTCTGGTGGGAGAACAAAGCTGAG

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The invention relates to novel legless (1gs) proteins and polynucleotides encoding such proteins. Lgs sequences are useful for the treatment of disorders of cell fate such as differentiation or proliferation. The invention is used to treat blood disease or a cancerous condition characterised by over-stimulation of the Wnt pathway such as colon, breast, head and neck, brain, thyroid, medulloblastoma or skin cancer and is administered to prevent progression from a pre-neoplastic or nonmalignant condition to a neoplastic or malignant state. It is administered to promote tissue regeneration and repair. The invention is also useful in the therapy of diseases cost by an over-activation of Wg pathway. It is useful for reducing 1gs gene expression in an invertebrate or vertebrate organism or an invertebrate or vertebrate cell line. The invention is also useful in gene therapy. The present sequence is human 1gs-1 cDNA used in the invention

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             499
                                                                                                                                                                                                                                                                                                                 vertebrate Lgs protein homologues or fragments, antibodies, antibody fragments, lgs antisense DNA, lgs antisense RNA, lgs double-stranded RNA, fragments, lgs antisense DNA, lgs antisense RNA, lgs double-stranded RNA, and lpsptides or chemical and natural compounds being capable of interfering with Lgs function, synthesis and degradation. The compound is administered to cell differentiation or cell proliferation. The compound from a pre-neoplastic or non-malignant condition by preventing progression from a pre-neoplastic or non-malignant condition to a neoplastic or malignant state. The cancerous condition is characterised by overstimulation of the Wnt pathway and is medulloblastoma or cancer of the colon, breast, head and neck, brain, thyroid or skin. The therapeutic compound may also be administered to a blood disease to promote tissue regeneration and repair. This sequence represents cDNA encoding a human Lgs/Bc19 partial polypeptide of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          140 GCTTTTGAGAGGCTCCTGCCCCAGGTGGAGGCGCCCGCAAGGCCCATCCGCGCCGCTCAG 199
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    558
                                           amino acid domains with a Legless (Lgs) protein and is therefore a functional homologue of Lgs. The invention also relates to a nucleotide sequence encoding a protein present in invertebrate and/or vertebrate
                               or more homologous
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      3139 GCTTTGGAGAGGCTCCTGCCCCAGGTGGAGGCGGCCCGCAAGGCCATCCGCGCGCCTCAG

objunctions are deposited under the accession intumers ALC 90000. Into sequences are used as tissue markers, chromosomal tags, for altibodies, also as nutritional sources and supplements and in gene therapy. The secreted proteins are useful therapeutically, in human or veterinary medicine, e.g. for modulating cell proliferation or infections, autoimmune disease, organ rejection, or to induce tumour immunity), as regulators of haematopoiesis (e.g. for treating anemia or inconjunction with tumour therapy), to stimulate growth of tissue for wound healing, as fertility control agents, for regulating demonstais or chemokines (e.g. for direction), as necessatic and thrombolytic agents (e.g. in treatment of haemophilia or infarctions), as antimicrobial agents, for modifying biorhythms, as pepetite, or metabolism, as analgesics and many other uses. The proteins are also used to raise antibidies, used as diagnostic immunoassay care also used to raise antibizing) for treating e.g. cancer 2089 2149 2209 844 964 veterinary medicine; cell proliferation; immunostimulant; infection; immunosuppressant; autofimmune disease; organ rejection; tumour; anemia; haematopoiesis; wound healing; fertility control; chemotaxis; analgesic; thrombolytic; haemophilia; infarction; antimicrobial agent; cancer; se Secreted protein; human; tissue marker; genetic disease; gene therapy; 2210 CACAGCTCCAGGACCAGTGCAGGCTGCCTTTT-GGCGTGTCTGGAATAATGG 2090 GATGAAGAATACATTGCTGGGAACCAAGAAATAGGACCATCCTATGAAGAATTTCTTAAA 2150 GAAAAGGAAAAACAGAAGTTGAAAAACTCCCCCCAGACCGAGTTGGGGCCAACTTTGAT CAGGATATACCAGGAGTTGGTAACATCCACTCCAGGTGCCACACCTCCCTGGATGATCCAA 785 GATGAAGAATACATTGCTGGGAACCAAGAAATAGGACCATCCTATGAAGAATTTCTTAAA 905 CACAGCTCCAGGACCAGTGCAGGCTGGCTGCCCTCTTTTGGGGCCGCGTCTGGAATAATGG Gaps ä The invention provides polynucleotides (AAX60579-X60687) encoding specific secreted human proteins (AAY16779-Y16787). The nucleic aci sequences are deposited under the accession number ATCC 98580.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The present sequence is one of 3351 sequences in a library of human polynucleotides. The library is used to detect differentially expressed genes correlated with a cancerous state of a mammalian cell and can detect colon, prostate, breast and lung cancer. The library can be used to produce probes for detection of mRNA and to produce additional copies of the polynucleotides. The probes can be used for chromosome mapping of the polynucleotides. The probes can be used for chromosome mapping of the polynucleotides and for detection of transcription levels. Ribozymes or antisense oligonucleotides can be generated. The polynucleotides and the blood or tissues) that will detect the earliest changes along the carcinogenesis pathway and/or monitor the efficacy of therapies and produces against them can be used in pharmaceutical compositions to treat the cancers and proliferative disorders such as neoplasia,

The invention relates to isolated polymucleotide (I) and polypeptide (II) sequences. (I) is useful as hybridisation probes, polymerase chain reaction (PCR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The polymucleotides are also used in diagnostics as expressed sequence tags for identifying expressed cerivity of (II) as useful in gene therapy techniques to restore normal activity of (II) or to treat disease states involving (II). (II) is useful for generating antibodies against it, detecting or quantitating a polypeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical imaging of sites expressing (II). (I) and (II) are useful for treating disorders involving aberrant protein expression or biological activity. The polypeptide and polymucleotide sequences have applications in diagnostics forensics, gene mapping, identification of mutations and the contained of the processing contained that it is an expression or contained the assess biodiversity and the contained of the contained that it is an expression or contained the assess biodiversity and the contained that it is an expression or contained the contained that it is an expression and contained the contained that it is an expression or contained the contained that it is an expression or contained the contained that it is an expression and contained that it is an expression and contained the contained that it is an expression and contained the contained that it is an expression and contained the contained that it is an expression and contained the contained that it is an expression and contained the contained that it is an expression and contained the contained that it is an expression and contained the contained that it is an expression and contained the contained that it is an expression and contained the contained that it is an expression and contained the contained that it is a contained to the contained that it is an expression and contai
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  1056

corde. The polymucleotides can be used to express recombinant proteins for analysis, characterisation or therapeutic use, as markers for tissues in which the corresponding protein is expressed, as molecular weight markers on Southern gels, as chromosome markers or tags to identify chromosomes or to map related gene positions, to compare with endogenous Chromosomes or to map related gene positions, to compare with endogenous DNA sequences in patients to identify potential genetic disorders, as a source probes to hybridise and discover novel related DNA sequences, as a source of information to derive PCR primers for genetic fingerprinting, to raise anti-protein antibodies and in gene therapy. The proteins can be used to raise antibodies or to elicit another immune response, as reagents in biological fluids, as markers for tissues in which the corresponding protein is preferentially expressed and to treat autoimmune disorders (e.g. multiple sclerosis, systemic lupus erythematosus, insulin dependent diseases, bone fractures, cartilage damage, central nervous system clasorders (e.g. Alzheimer's disease or Parkinson's disease) and cancers. The proteins and polymucleotides are also useful as nutritional sources or sequence represents a human polymucleotide of the invention.

This sequence represents an expressed sequence tag (EST), and is a polynucleotide of the invention. The polynucleotides of the invention are all secreted EST sequences isolated from a variety of human tissue sources. The EST sequences and proteins encoded by them are predicted to have useful biological activities which would make them suitable for treating, preventing or ameliorating medical conditions in humans and animals, although no supporting data is given. Suggested activities include mutritional activity, tissue growth activity, activity, activity, tissue growth activity, activity, activity, receptor/ligand activity, and activity, receptor/ligand activity, anti-inflammatory activity, cadherin/tumour invasion suppressor activity, tumour inhibition activity. The EST sequences are also stated to be useful for gene therapy
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              340 AGAAAAGGAAAAAACAGAAGTTGAAAAAAACTCCCCCCAGACCGAGGTTGGGGCCAACTTTGA 399

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                à
                                                                                                                                                                                                                                    The invention relates to isolated polynuclectide (I) and polypeptide (II) sequences. (I) is useful as hybridisation probes, polymerase chain reaction (FCR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The polynuclectides are also used in diagnostics as expressed sequence tags for identifying expressed genes. (I) is useful in gene therapy techniques to restore normal cutivity of (II) or to treat disease states involving (II). (II) is useful for generating antibodies against it, detecting or quantitating a polypeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical imaging of sites expressing (II). (I) and (II) are useful for treating disorders involving abbrrant protein expression or biological activity. The polypeptide and polynuclectide sequences have applications in diagnostics, forensics, gene mapping, identification of mutations cappendiable for genetic disorders or other traits to assess biodiversity and to produce other types of data and products dependent on DNA and amino acid sequences. AAS64197-AAS94564 represent novel human diagnostic patent did not appear in the printed specification, but was obtained in the winted specification, but was obtained in the winted specification, but was obtained in the winted specification.

(first entry)

06-OCT-2000 AAC18524;

```
The present sequence is one of a large number of 5' ESTs derived from mRNAs encoding secreted proteins. No ORF has yet been conclusively identified within the present sequence. The 5' ESTs were prepared from total human RNAs or polyA+ RNAs derived from 30 different tissues. EST sequences usually correspond mainly to the 3' untranslated region (UTR) of the mRNA because they are often obtained from oligo-dT primed cDNA libraries. Such ESTs are not well suited for isolating cDNAs sequences derived from the 5' ends of mRNAs and even in those cases where longer CDNA sequences have been obtained, the full 5' UTR is rarely included. 5' ESTs are derived from mRNAs with intext 5' ends and can therefore be used to obtain full length cDNAs and genomic DNAs. 5' ESTs are also used in diagnostic, forensic, gene therapy and chromosome mapping procedures. They are used to obtain upstream regulatory sequences and to design
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             199

RESULT 15
ADB49603/c
                                      A single-stranded DNA (or its complementary strand or the corresp. double stranded DNA) which comprises one of the 7837 "GS" sequences given in AAT19001-T26837 and which is able to hybridise to part of human genomic DNA, cDNA or mRNA is claimed. The GS (Gene Signature) sequences were obtained from 3'-directed CDNA libraries prepared from various human tissues; synthesis of CDNA was initiated from the 3'-end of mRNA by using poly(T) as the sole primer. Since the 3'-untranslated sequence is unique to a particular mRNA species, almost all the 3'-oriented CDNAs hybridise with specific mRNAs. Each library is constructed so as to reflect accurately the relative abundance of different mRNAs in the particular tissue from which it was derived. The appearance frequency of a given GS in a cDNA library can be determined (esp. using primers and probes derived from the GS sequences) as a means of diagnosing abnormal cell cuction or for recognising different cell types
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         4;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      AAGTCAACCAAACCCCTATTATACCTTCCACCCAAATTCTTTATCATTGTCTTTAGG 1141

The present invention describes a method for determining whether a compound induces a toxic effect on a tissue or cell. The method comprises preparing a gene expression profile of a tissue or cell sample exposed to the compound, and comparing the gene expression profile to a database comprising data or information on the Tox mean and non-Tox mean value. The method is useful for predicting or identifying at least one toxic genes listed in the specification are useful as diagnostic or toxicity markers for the prediction or identification of the physiological state of tissue or cell sample that has been exposed to a compound, or to identify or predict the toxic effects of a compound or an agent. These may also be used as markers for monitoring toxicity progression or for drug screening. The present sequence represents a primary rat hepatocyte toxicity modelling related gene sequence from the present invention.
                                                                                                                diagnostic marker;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Determining if a compound induces a toxic effect on a tissue or cell, for

BI859740 884 bp mRNA linear EST 10-OCT-2001 603387142F1 NIH_MGC_87 Homo sapiens cDNA clone IMAGE:5395906 5',

GI:16000487

mRNA sequence. BI859740 BI859740.1

DEFINITION RESULT 2 BI859740 LOCUS

ACCESSION

Homo sapiens (human) Homo sapiens

VERSION KEYWORDS SOURCE ORGANISM

REFERENCE

Homo sapiens Vakaryota; Metazoa; Chordata; Craniata; Vertebrata; Buteleostomi; Mammalia; Butheria; Primates; Catarrhini; Hominidae; Homo. 1 (bases 1 to 884)
